

**Purpose:** This form is to help TACF® record, map, and analyze chestnut trees across their native range.

**Result:** An analysis of the macro and microscopic characteristics of the leaf and twig sample will be completed by a TACF identification expert and the results will be sent to the submitter in **4-8 weeks**.

### LEAF and TWIG SAMPLE

- 6-12" of twig and **attached, mature** leaves growing in the full sun.
- Press sample **flat** between sheets of cardboard and place in an envelope.
- Use a single paper towel between the sample and cardboard to cushion and absorb moisture.
- Do **not** wrap in plastic, as samples will mold in the mail.
- Do **not** ship overnight. It's not necessary and we won't ID your sample right away.
